

Shibil Shamsudheen

AI Automation Builder · Agent Developer

Chemical engineer turned AI automation builder. I design, deploy, and administer production automation on infrastructure I run myself.

Dubai, UAE – Company Visa (Sterling Perfumes), available to transfer · +971 54 322 0599 · shibilshamz123@gmail.com

PROFESSIONAL SUMMARY

AI automation builder with a chemical engineering background and 3 years of UAE industry experience. Self-taught Python developer running a Hostinger Ubuntu VPS that carries a retrieval-augmented generation (RAG) CV search service – section-level chunking, sentence embeddings through ONNX Runtime, a Chroma vector store, and answers grounded in retrieved text with per-candidate citations – alongside a plugin-based NSE trading platform, a daily job-search pipeline, and self-hosted n8n behind Caddy with automatic TLS. Delivered a paid CV-extraction pipeline for a Dubai recruitment client. Pursuing AI Implementation, Automation, and AI Ops roles in Dubai (hybrid/office) or globally (remote).

PROJECTS

CV Semantic Search

September 2026

Retrieval layer over the HR CV Pipeline

[GitHub](#)

- Semantic search across processed CVs: a recruiter describes a role in plain English and gets ranked candidates back, matched on meaning rather than keywords, each cited to the CV section it came from
- Section-level chunking – CVs split on their own headings, experience one chunk per role – because a whole-document embedding averages a multi-topic CV into a point near none of its topics; retrieval over-fetches and collapses back to one entry per candidate
- Chunk IDs derive from the candidate's email, so re-indexing is an upsert: the same person submitted by two agencies collapses to a single entry at index time
- MiniLM-L6-v2 through ONNX Runtime rather than sentence-transformers – same model, same 384 dimensions, roughly a tenth of the footprint on a 3.8 GB VPS; eval written before any tuning gives recall@5 of 1.00 and MRR of 1.00, on retrieval alone, across a 39-candidate synthetic corpus

HR CV Pipeline

2026 · Client delivery

Built for a Dubai recruitment client

[GitHub](#)

- Paid client delivery: the recruiter was retyping 14 fields per CV by hand. Now they drag PDFs into a Google Drive folder and structured candidate rows appear in Google Sheets about a minute later – no UI to learn, no app to install
- 14-node n8n pipeline: Drive trigger → PDF text extraction → Claude Haiku 4.5 field extraction → two-level deduplication (against the sheet and within the current batch) → Sheets append → source file routed to /Done or /Errors
- Failure paths designed in, not bolted on: a scanned image-only PDF routes to an error branch instead of killing the batch, and duplicates still get filed so they stop re-triggering the poll
- Runs on self-hosted n8n (Docker) on infrastructure I administer, behind Caddy with automatic TLS

AI Job Hunter

May 2026 – Present

[GitHub](#)

- Python job-search pipeline running daily on a Hostinger VPS: four scrapers (Indeed and LinkedIn via Apify, Bayt and NaukriGulf via JSearch) → deduplication → Claude Haiku relevance scoring → tailored CV generation → Google Sheets → Gmail digest
- Flask runner under Supervisor exposes the pipeline over HTTP; a self-hosted n8n schedule triggers it at 5 PM Asia/Dubai and formats the digest email
- Every qualifying role gets a CV tailored to its job description and rendered to PDF automatically
- Scrapers run as isolated subprocesses reporting structured stats, so one failing source degrades the run instead of ending it

Stock Trading Agent v3

2026 – Present

[Live Dashboard](#) · [GitHub](#)

- Plugin-based trading platform for NSE built around four contracts – Market, Strategy, DataFeed, Risk – auto-discovered by a registry, so one strategy implementation runs unmodified across all four execution modes: backtest, historical replay, paper, and live
- No separate backtest engine to drift out of sync with live logic; replay and backtest are look-ahead-safe by construction, since each mode only ever sees bars up to the current simulated timestamp
- Ships two strategies (ORB+VWAP+Momentum, MA Crossover), free (yfinance) and real-time (Upstox API) NSE data adapters, ATR-based position sizing, and circuit breakers
- FastAPI + vanilla-JS dashboard with Excel trade reporting, deployed on a Hostinger Ubuntu VPS under systemd and publicly reachable
- 80 hermetic unit tests – no live network calls – covering market adapters, the Upstox OAuth lifecycle, risk engines, and historical replay

- Men's fashion advisor web app built solo in React, TypeScript, and the Anthropic Claude API – deployed on Vercel and live with UAE-based users
- AI styling recommendations across 3 body-type profiles and 4 seasonal colour palettes; affiliate-monetised via Amazon UAE and Noon
- Mobile version in development: React Native + Expo + Supabase + Gemini API

WORK EXPERIENCE

Lab Assistant - Perfumery Department

Sep 2024 – Present

Sterling Perfumes Industries LLC · Dubai, UAE

- Manage 10,000+ litres of bulk RTF batches monthly at a 99% on-time delivery rate across a multi-product fragrance portfolio
- Operate SAP ERP for raw material inventory management – stock tracking, near-expiry flagging, uninterrupted supply
- Optimised 5 fine fragrance formulations through systematic reformulation, achieving a 12% raw material cost reduction with no scent performance compromise
- Authored batch sheets that reduced production team errors and queries by 15%, streamlining R&D-to-production handoffs
- Execute 25+ fragrance sample compounding cycles per month plus daily QC checks (density, stability, olfactory), with zero critical documentation errors

Chemist & QC - Perfumery Department

Jun 2023 – Jul 2024

Faan Al IbdAA Perfumes & Cosmetics · Sharjah, UAE

- Collaborated with 2–4 clients monthly to define requirements and deliver customised fine fragrance samples through the full development cycle
- Developed novel perfume formulations and optimised legacy products within 1% target cost deviation
- Conducted QC testing on 100% of finished batches; prepared all regulatory documentation (COA, IC, MSDS) for domestic and international distribution

SKILLS

AI & Agents	Claude Code · Claude API · Claude Haiku 4.5 · Gemini API · Groq API / LLaMA 3.1 · MCP Protocol · LLM prompt design for structured extraction
Retrieval & RAG	Retrieval-augmented generation · Vector databases (Chroma) · Sentence embeddings (MiniLM-L6-v2 via ONNX Runtime) · Semantic search · Chunking strategy · Retrieval evaluation (recall@k, MRR) · Grounded generation with citation
Automation	n8n (self-hosted, production workflows) · Apify · JSearch / RapidAPI · Google Sheets API · Gmail API · GitHub Actions · UiPath RPA (in progress)
Languages	Python 3.12 · FastAPI · Flask · Node.js · React / TypeScript · React Native · Playwright
Infrastructure	Ubuntu VPS administration · systemd · Supervisor · Docker · Caddy (reverse proxy + automatic TLS) · ufw · Vercel · Supabase
Data	pandas · pandas-ta · yfinance · SQLite · Google Sheets as a system of record
Enterprise & Lab	SAP ERP · QC/QA · GLP / EH&S · Fine fragrance compounding
Soft Skills	Systems thinking · Technical documentation · Self-directed learning

EDUCATION

B.Tech Chemical Engineering

2017 – 2021

Lovely Professional University · Punjab, India

CERTIFICATIONS & LANGUAGES

- UiPath RPA Developer Associate – in progress, exam targeted Q4 2026 (v2024.10 Academy curriculum)
- UAE Driving License (valid)
- Elementary First Aid & Industrial Safety – certified
- Chemical Engineering Computations using MS Excel – webinar certificate
- **Languages:** English (Fluent) · Malayalam (Native) · Hindi (Fluent)
